Claude

ChatGPT

Hi Claude, can you give me an R script to produce a dot plot with ggplot2? My dataset is called starwars and I want to plot in the x-axis the variable mass and in the y-axis the variable height. I want the dots to be colored by sex. I'd also like to add a background

We need to know:

1. What to ask for
2. What the code is doing

Created a file, shared a file, r

Here's the script:

```
r
library(tidyverse)

starwars |>
  filter(!is.na(mass))
ggplot(aes(x = mass, y = height)) +
  geom_point(aes(color = sex), size = 3, alpha = 0.8) +
  geom_smooth(method = "lm", se = TRUE, color = "black", fill = "grey70") +
  labs(x = "Mass (kg)", y = "Height (cm)", color = "Sex") +
  theme_bw(base_size = 18)
```

Materials for Intro to R lessons

Step 1: Install R

<https://cran.rstudio.com/>

Step 2: Install RStudio

<https://posit.co/downloads>

Step 1: Install R

<https://cran.rstudio.com/>

The Comprehensive R Archive Network

Download and Install R

Precompiled binary distributions of the base system and contributed packages, **Windows and Mac** users most likely want one of these versions of R:

- [Download R for Linux](#) ([Debian](#), [Fedora/Redhat](#), [Ubuntu](#))
- [Download R for macOS](#)
- [Download R for Windows](#)

R is part of many Linux distributions, you should check with your Linux package management system in addition to the link above.

What R might look like

What is Rstudio?

An interface for interacting with and executing R commands

Step 2: install RStudio

<https://posit.co/downloads>

DOWNLOAD

RStudio IDE

The most popular coding environment for R,
built with love by Posit.

Used by millions of people weekly, the RStudio integrated development environment (IDE) is a set of tools built to help you be more productive with R and Python. It includes a console, syntax-highlighting editor that supports direct code execution. It also features tools for plotting, viewing history, debugging and managing your workspace.

If you're a professional data scientist and want guidance on adopting open-source tools at your organization, don't hesitate to book a call with us.

R:

Function(Object, Arguments)

Objects

- Named container holding some data
- Its value is assigned by the symbol “<-”

```
> x <- 45  
> x  
[1] 45  
>
```

```
> y <- "apple"  
> y  
[1] "apple"  
>
```

Objects

0-dimensional

```
> x <- 45
```

```
> y <- "apple"
```

1-dimensional

```
> x <- c(1,2,3)
```

```
> x
```

```
[1] 1 2 3
```

```
> y <- c("apple", "pear", "banana")
```

```
> y
```

```
[1] "apple" "pear" "banana"
```

VECTORS

2-dimensional

```
> z <- data.frame(x,y)
```

```
> z
```

```
  x      y
1 1  apple
2 2   pear
3 3 banana
```

DATA FRAMES or **MATRICES**

Shortcut to write "<-"
Option + -

Objects

Mixed

S4 OBJECT

LISTS

FITTED MODEL

FACTOR

Objects

Objects have a specific **class**

```
> x <- 45  
> class(x)  
[1] "numeric"
```

```
> y <- "apple"  
> class(y)  
[1] "character"
```

```
> x <- "45"  
> class(x)  
[1] "character"
```

Fundamental classes: numeric, integer, character, logical

Objects

Specific functions require objects of a specific class

```
> sum(45, 46)  
[1] 91
```

```
> sum("45", "46")  
Error in sum("45", "46") : invalid  
'type' (character) of argument
```

Functions

Named block of code that:

1. Takes an input
2. Does something with those inputs
3. Returns an output

Functions

```
> sum(45, 46)  
[1] 91
```

1. Takes an
input

(45, 46)

2. Does something
with those inputs

45 + 46

3. Returns an
output

[1] 91

Functions

We can assign the output of a function to an object:

```
> x <- sum(45, 46)  
> x  
[1] 91
```

Functions

Some functions have a specific character assigned to them, **OPERATORS**

```
> sum(45, 46)
[1] 91
```

```
> 45 + 46
[1] 91
```

+	addition
-	subtraction
*	multiplication
/	division
^	exponent
%%	modulo (remainder)
/%	integer division

<-	assign (standard)
[]	subset, keep structure
[[]]	extract single element
\$	access by name (lists, data frames)
@	access a slot (S4 objects specifically)
:	sequence generator, e.g. 1:5
~	formula operator, e.g. y ~ x

Packages

Bundle of functions that can be downloaded from a repository:

- **CRAN:** `install.packages("...")`
- **Bioconductor:** `BiocManager::install(".....")`
- **GitHub:** `devtools::install_github("user/repo")`

To use them they need to be activated:

```
> library("dplyr")
```

Tidyverse

R packages for data science

The tidyverse is an opinionated **collection of R packages** designed for data science. All packages share an underlying design philosophy, grammar, and data structures.

Install the complete tidyverse with:

```
install.packages("tidyverse")
```
